Basel II Pillar III Disclosures As of December 31, 2011

1. Introduction

The purpose of this report is to disclose the information in regards to capital maintenance on Basel II Pillar III of the Solo Basis and Full Consolidation Basis that required by the Bank of Thailand. This report is compliance with the guidance of capital reserve information disclosure that promoted for market discipline. The information has disclosed for the Bank and Financial Business Group, qualitative and quantitative, specifically related to capital supervisory such as capital, level of risk, risk assessment process, capital adequacy and etc. It's beneficial to third parties and market participants for assessing the significant information disclosed, along with risks assessment of the financial institution and encouraging the financial institution to have better risk management process.

2. Scope of application

The Bank has disclosure information under Basel II Pillar III on a solo basis and full consolidation basis in accordance to BOT's Notification No. SorNorSor. 25/2552 Re: Information disclosure and Level Financial Group and No. SorNorSor. 6/2553 Re: Consolidated Supervision.

3. The list name and business type of companies in financial business group of Full Consolidation level

The companies under financial business group totaled 21 companies are as following:

| Companies | Business Type |
|--|--|
| Ayudhya Development Leasing Company Limited | Leasing and hire-purchase |
| 2. Ayudhya Capital Auto Lease Public Company Limited | Auto leasing |
| 3. Ayudhya Total Solutions Public Company Limited | Auto leasing |
| 4. CFG Services Company Limited | Retail loan in form of hire purchase and |
| | loan pledged by car registration |
| 5. Ayudhya Card Services Company Limited | Credit cards and personal loans |
| 6. Ayudhya Capital Services Company Limited | Credit cards and personal loans |
| 7. General Card Services Limited | Credit cards and personal loans |
| 8. Krungsriayudhya Card Company Limited | Credit cards and personal loans |
| 9. Siam Realty and Services Company Limited | Car leasing and personnel services |
| 10. Total Service Solutions Public Company Limited | Collection services |
| 11. Krungsri Asset Management Company Limited. | Fund management |
| (Formerly known as ".Ayudhya Fund Management Company Limited") | |
| 12. Ayudhya Asset Management Company Limited | Asset management |
| 13. Krungsri Securities Public Company Limited | Securities |
| (Formerly known as "Ayudhya Securities Public Company Limited") | |
| 14. Sri Ayudhya Capital Public Company Limited. | 1/ Holding company |

| (Formerly known as "Quality Life Assurance Broker Company Limited") | |
| 18. Krungsri General Insurance Broker Company Limited | General insurance broker |
| (Formerly known as "Quality General Insurance Broker Company | |
| Limited") | |
| 19. Tesco Card Services Company Limited | Credit cards and personal loans |
| 20. Tesco Life Assurance Broker Company Limited | Life assurance broker |
| 21. Tesco General Insurance Broker Company Limited | General insurance broker |

^{1/} On 20 December 2011, the company has transformed its business to a holding company for invest in other companies.

4. Capital Information

4.1 Capital Structure

Tier 1 Capital are composed of the followings:-

- Issued and fully paid up share capital and net premium
- Statutory reserve
- Cumulative profit after appropriation, already approved by annual shareholders meeting
- Deferred tax asset (reduction item)
- Goodwill (reduction item)
- Minority interest
- Investment deduction item: 50% from tier 1 capital and 50% from tier 2 capital (reduction item)

Tier 2 Capital are composed of the followings:-

- 70% of land revaluation
- 50% of building revaluation
- Reserve for assets classified as normal (calculation not over 1.25% of total risk asset)
- 45% of investment revaluation surplus (net) in securities available for sale
- Investment deduction item: 50% from tier 1 capital and 50% from tier 2 capital (reduction item)
- Long-term subordinate debt instrument

Long-term subordinate debt can be counted as Tier 2 for the paid amount but not over than 50% of Tier1 and reduce of 20% each year for the last 5 years. On June 23, 2010, the Bank issued subordinated debenture #1/2010 in the amount of Baht 20,000 million with a maturity in June 23, 2020 at the fixed rates of 4.35% per annum for the years 1-3, 4.75% per annum for the years 4-6 and 5.50% per annum for the years 7-10, payable

quarterly on the 23 of March, June, September and December of each year. The Bank has the right to redeem debenture #1/2010 before the maturity date subject to the approval of the Bank of Thailand. However, the Bank may redeem the debentures prior to the fifth anniversary of the issue date, if the bank is notified by Bank of Thailand that the debentures shall not be treated as tier 2 capital or the debentures shall be treated as tier 2 capital less than 50% of tier 1 capital of the Bank.

4.2 Capital Adequacy

The Bank has adopted the Basel Standardized Approach for the capital calculation for credit risk, market risk, and operational risk.

The Bank strongly recognizes the importance of capital. Although the Bank of Thailand requires that banks maintain minimum capital adequacy ratio of 8.5% for credit risk, market risk, and operational risk, Krungsri maintains, as a policy, a minimum capital adequacy ratio higher than the minimum official requirement.

Moreover, the Bank closely monitors economic and other internal and external factors that may affect the Bank's capital. Information from a 3-year strategic business plan, which is prepared every year, is used as the base for capital assessment. The Bank has in place an Internal Capital Adequacy Assessment Process (ICAAP), which comply the Basel II Pillar II guideline, and which requires that a stress test to be conducted on a regular basis. If the result of the stress test indicates a potential that the capital adequacy level may decline to an unacceptable level, the Bank's management will prepare an action plan in order to ensure that the capital level for the Bank and the financial business group continues to be adequate at all times.

5. Risk exposure and assessment

Risk Management Principles

The Bank's risk management covers 3 major risks, namely credit risk, market risk, and operational risk. The Bank has in place separate policies to manage these risks, since each has different characteristics. However, there are common risk management practices among these risks, for example, ceiling limits, control mechanism, risk assessment and risk monitoring procedure, and reporting procedure to ensure that the relevant parties are well-informed of the prevailing situation. The Bank also invests in risk assessment tools and good data governance in order to enhance the efficiency and effectiveness of risk control, risk measurement, and risk monitoring.

In addition to credit risk, market risk, and operational risk, the Bank has put in place an Internal Capital Adequacy Assessment Process (ICAAP) under the Basel II Pillar 2 guideline. The ICAAP covers the additional risks – credit concentration risk, interest rate risk in the banking book, liquidity risk, strategic risk, and reputation risk, etc. The Bank ensures that appropriate procedures are in place to minimize each of these risks, and regularly conducts a stress test to assess the impact of a severe event on the Bank's capital.

Roles and duties of internal auditors in auditing risk management process

Internal auditors of the Bank have the duty to audit and assess the adequacy and effectiveness of the Bank's risk management process to ensure that it is adequately and appropriately commensurate with the complexity of the Bank's transactions. The audit of risk management process is undertaken to provide reasonable assurance that the Bank's operations, which shall be within the Bank's acceptable risk level, will meet established objectives and targets.

Internal audit adopts the systematic approach of assessment; supports the development and enhancement of risk management system, internal control system and good governance system; and is based on the International standards for the professional practice of internal auditing, the internal audit practice for financial institutions established by the Bank of Thailand and the guidelines determined by the Basel Committee on Banking Supervision in relation to internal audit function in banks.

The scope of work of the internal audit encompasses all activities of the Bank undertaken by its entities in Thailand, overseas branches and companies in its financial business group (full consolidation). Internal audit of risk management activities, among others, includes the following:

- Determination of policies, structure, roles and responsibilities of risk management function;
- Determination of risk tolerance levels;
- Operational processes of functions within the Bank and compliance with relevant risk management policies;
- Risk management process which includes risk identification, measurement and assessment, risk management, risk monitoring and reporting.

The audit of risk management process covers the credit risk, the market risk, the liquidity risk and the operational risk and the Bank's internal auditors also review the Internal Capital Adequacy Assessment Process (ICAAP).

6. Credit risk

6.1 General information of credit risk exposure

Credit Risk Management

Credit risk is the risk that the Bank's counterparty will not be able to fulfill its obligation with the Bank, resulting in a loss to the Bank's income and capital.

Credit risk management principle and guideline, credit analysis, and credit approval process, are detailed in the Bank's Credit Risk Management Policy and other relevant policies. The supervision of the requirements is conducted by a Risk Unit independent of the Business Unit. The Risk Management Group is responsible for establishing credit risk management policy, credit risk analysis, portfolio risk measurement, reporting of portfolio status, credit risk review, and the management of non-performing loan.

Credit Risk Management Structure

The Bank maintains an organizational structure that encourages good corporate governance and allows proper checks and balances between the Risk Management Group and the Business Units. An effective information management system is also put in place to enhance risk control, risk measurement, and risk monitoring.

The committees involved with the management of credit risk are:

- The Board of Directors has authority to approve credit applications greater than Baht 3,000 million as well as credit applications from the Bank's subsidiaries, and associated and related companies. The Board of Directors is also responsible for the appointments of the Credit Committee, the Risk Management Committee, and the Collateral Valuation Committee.
- The Credit Committee is comprised of high-level executives from the Risk Management Group and other relevant functions. The Credit Committee is authorized to approve credit applications of up to Baht 3,000 million.
- The Risk Management Committee has the following responsibilities:
 - 1) Identify and formulate the Bank's integrated risk management policies.
 - Oversee, control, and review the Bank's business practices to ensure that they are in compliance with the integrated risk management and the good corporate governance principles.
- The Collateral Valuation Committee is in charge of the following activities:
 - Establishing and reviewing policies/procedures regarding the valuation of collateral received in support of loan applications, the valuation of foreclosed or auctioned properties, and the appraisal reviews.
 - 2) Oversee and control the Bank's internal property appraisers to ensure integrity and compliance with the procedures set forth by the Bank and the Bank of Thailand.

Control, Measurement, Monitoring and Review of Credit Risk

Credit Risk Control

In addition to ensuring integrity and independence of the credit risk management unit from the business functions, the Bank also maintains credit risk controls in the following areas:

1) Credit limit and credit analysis

Credit limit is set by analyzing the customer's operating performance, financial status, credit needs, debt-servicing ability, and the risk level.

2) Credit approval process

The Bank categorizes customers into three groups, namely, corporate, SME, and retail customers, in order to effectively manage the different risk characteristics while providing financial products and services appropriate to the specific needs of each customer group. The credit approval process for each customer group is summarized as followed:

- Corporate and SME credit approval

The approval is on the basis of the customer's need, the risk level, the debtservicing ability, available collateral, economic and industry trends. Credit approval is made by the appropriate committee or the authorized persons.

Retail credit approval

The approval is based on the customer's characteristics, past repayment record, size of loan relative to income, compared with their income, collateral, and repayment ability. For the personal and mortgage loans, credit scoring is also used as part of the approval process

Credit Risk Measurement

The Bank measures the risk levels of the corporate and SME customers through internal rating tools, which use information from the customer's financial, comparative market information, and other customer's qualitative information, as factors in determining rating. The internal rating is used when considered credit application, and is required to be reviewed at least once a year.

The Bank currently has two internal risk rating tools, one for corporate customers, which has been used since 2001, and the other for SME customers, which has been used since 2006. Both rating tools divide risk into 12 grades, each with different risk level. The Bank has also developed the PD-based rating models for both groups of customers which are currently used in parallel with the existing tool together with the model validation and the calculation of probability of default (PD).

Credit Risk Monitoring and Review

Post-credit approval, the Bank maintains a procedure to regularly monitor and review customers and the credit portfolio risks as followed:

1) Annual credit risk review

In general, customer's credit risk is reviewed once a year. The review must cover the customer's current performance, credit quality, financial standing, etc.

2) Credit portfolio status report

The Bank's Board of Directors and senior management are regularly updated on the portfolio composition and portfolio credit quality. The report is used as a tool to manage the overall risk level. Credit portfolio report includes: a portfolio composition classified by types of industry, levels of risk, geographical areas, as well as identification of major corporate. Other reports prepared include debt classification, provisioning allowances, capital adequacy ratio, and etc.

3) Stress testing

Stress testing is performed in order to gauge an extreme but plausible event that may arise and affect the Bank's and Financial Business Group's capital, the credit portfolio, or the specific customers. When the stress test result indicates material impact on the Bank's capital, a strategy and action plan is developed in order to prevent or lessen the potential adverse impact.

The Bank also provides credit risk management guidelines to its subsidiaries and associated and related companies in line with those adopted by the Bank.

Non-Performing Loan Management (NPL)

The Bank's non-performing loans are managed by a dedicated team of specialists with experience and expertise in dealing with impaired loans in order to improve asset quality and minimize financial losses.

Definition of default and impairment of assets

1. Definition of default

Default means the debtor is not able to pay the debt within the specified time in the contracts or the due date under contract made with the bank.

2. Definition of impairment of assets

The carrying amounts of the Bank and subsidiaries' assets are reviewed at each financial statement date to determine whether there is any indication of impairment. If any such indication exists, the assets' recoverable amounts are estimated by using discounted cash flows.

Guidelines/statistical methods used to calculate general provision and specific provision

Allowance for doubtful accounts is determined through methods in accordance with the Bank of Thailand's regulations. The Bank and its subsidiaries categorize their loan portfolio into six categories and determine allowance for doubtful accounts subject to different levels of provisioning. Allowance for doubtful accounts for loans classified as normal and special mention are calculated based on the minimum percentage in accordance with the BOT's guidelines by using the value of collateral for calculation of reserve. For loans classified as substandard, doubtful and doubtful of loss, the allowance

rate is 100 percent of the difference between the outstanding loan value and the present value of expected cash flow from proceeds of the collateralized assets

Subsidiaries involved in hire-purchase businesses, with qualified portfolios under the BOT regulations, calculate allowance for doubtful accounts by using the collective approach which classifies a group of loans having similar credit risk characteristics based on the historical loss experience of each loan category.

Subsidiaries involved in the securities business provide an allowance for doubtful debts based on a review of the debtor's ability to make repayment, taking into consideration recovery risk and the value of the collateral. Such debt classifications and provisions are made in accordance with the guidelines of the Securities and Exchange Commission.

For the calculation of capital to risk weighted assets of the Banks and Financial Business Group by SA approach, reserves has been set aside for assets on the statement of financial position and off-statement of financial position items as follows:

Specific Provision

Refers to reserve a set aside for specific asset in the statement of financial position and off-statement of financial position, including the decline of the market price adjustment of debt and equity securities held to for trading and available for sale and impairment but excluding reserve for assets classified as normal counted to Tier 2.

General Provision

Refers to the reserve for assets classified as normal but exclude reserve for assets classified as normal counted in specific provision.

6.2 Credit risk exposures by the Standardized Approach

The Bank calculates its capital adequacy ratio under the Standardized Approach. The Bank uses ratings assigned by Standard & Poor's, Moody's, Fitch International, Fitch (Thailand), TRIS Rating, and the information from the OECD Country Risk Classification, in identifying the risk weight of each customer.

6.3 Credit risk mitigation by the Standardized Approach

- The Bank manages and revalues collateral in accordance with the Bank of Thailand's guidelines.
- 2. The main credit risk mitigation is financial collateral, namely cash, equity instrument, and debt instrument that comply with the Bank of Thailand's guidelines.
- 3. The main eligible guarantors and credit derivative providers are government, state enterprises, and high-quality corporate, all of whom have characteristics that comply with the Bank of Thailand's guidelines.
- 4. At present, the Bank does not use on-statement of financial position and offstatement of financial position nettings as credit risk mitigation.

7. Market risk

Market risk refers to the adverse impact on income and capital funds caused by price changes in the trading and banking books with regard to interest rates, exchange rates, equity instruments, and commodities. These rates and price movements are external factors beyond the Bank's control. The Bank has therefore instituted a market risk management framework to use as a guideline for managing risk properly and effectively both at the Bank and at subsidiary level. The Bank also maintains adequate capital relative to risk exposure and ensures risk management practices of subsidiaries remain at a level that is compatible with the Bank and consistent with the consolidated supervision policy of the Bank of Thailand.

Organization and Structure

The Board has delegated risk management to the Risk Management Committee and the Assets and Liabilities Management Committee, which have the authority to manage and control market risk in a manner consistent with the prescribed policy. The Assets and Liabilities Management Committee (ALCO) establishes guidelines for appropriate management of assets, liabilities, and Off-statement of financial position items. The organizational structure clearly segregates the duties and responsibilities of the units responsible for transaction execution, operations, and risk management to avoid conflicts of interest. The Treasury Division executes transactions and manages positions under the risk limits approved by the Board of Directors. The Market Risk Management Department assesses, monitors, and reports the Bank's risk exposures.

Managing Market Risk in Trading Book and Banking Book

In 2011, the Bank's aggregate market risk is well within acceptable levels. The assessment, control, and monitoring of market risk can be divided into two parts: transactions in the trading book and transactions in the banking book, as follows:

- 1. Risks from transactions in the trading book: We use Value-at-Risk (VaR) and conduct back-testing to assess the reliability of the models. We also conduct a stress testing to assess risk under crisis situations.
- 2. Risks from transactions in the banking book: We manage risks from mismatches of the interest rate structure and on- and off-statement of financial position positions. We assess the probable impact on net interest income (earning perspective) from assets, liabilities, and Off-statement of financial position items that are sensitive to interest rates. We also conduct re-pricing gap analysis in terms of static simulation and dynamic simulation according to the projected interest rate trend. In addition, we analyze interest rate risk which reflects the sensitivity of the economic value of shareholder equity (Economic value perspective).

Information relating to market risk under the standardized approach

The assessment, control, and monitoring of market risk in the trading book, we conduct risk assessments and maintain capital funds at Bank and subsidiary levels based on a standardized approach dictated by Bank of Thailand guidelines.

8. Operational Risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems, or from external events. This definition includes legal risk but excludes strategic and reputation risk. Operational risk is an integral and unavoidable part of the Bank's business as it is inherent in our endeavors to provide services to customer and to generate profits for shareholders. The Bank and the Bank's subsidiaries have implemented a sound operational risk management framework as per the Bank of Thailand's requirements, including Basel II. This ensures that our operational risks are effectively managed and controlled within the prescribed risk appetite.

Operational risk management structure, roles and responsibilities

The Bank recognizes that operational risk is a significant concern and provides sufficient resources to manage the risk within acceptable levels through the promotion of sound operational risk management governance and frameworks. Each employee is responsible for managing operational risk.

The Group Operational Risk Management Policies, approved by the Board of Directors, stipulate the minimum requirements of a framework that is implemented throughout the organizational structure along three lines of defense to ensure independent oversight of operational risk management throughout the Group. All business units, as primary operational risk owners and risk takers, have prime responsibility for day-to-day managing of operational risk in their operations according to the policies set out.

The Risk Management Committee, assigned by the Board of Directors, is responsible for formulating strategies, and conducting oversight of the adequacy of the risk and control processes. The Operational Risk Management Department, an independent function reporting to the Chief Risk Officer, is responsible for designing, implementing, and maintaining the operational risk framework and measurement system. In addition, the Internal Audit function provides independent assurance of the proper functioning of the design, adequacy, and effectiveness of our internal controls.

Operational risk management process, methodology and tool

Over the past year, we improved some of the key techniques which improve effectively managing and measuring operational risks across the Group:

Risk and control self-assessment (RCSA):

All units periodically identify and assess key operational risks and effectiveness of controls to ensure the risks are effectively managed within the business risk threshold. The decision to take action could be made to mitigate the risk promptly.

Key risk indicators (KRI):

KRIs are regularly collected and tracked both Bank-wide and at the business unit level. If risk levels exceed the acceptable threshold, immediate action is taken.

Operational risk losses data collection:

Losses beyond a certain threshold are systematically collected by the business units and reported to Operational Risk Management Department. The Bank extends the scope of loss definition covering any near-miss and incident. This standard criterion is used across the Group for reporting loss events. In addition, the new system includes a central loss database. The root causes are analyzed and corrective action is taken to mitigate losses. Referral of the escalation of individual events to senior management is determined by the seriousness of the event.

Outsourcing management:

The Bank establishes policies to set out the process for managing potential operational risks that might stem from sourcing arrangements. The risk assessing and monitoring process is in place. The Bank also ensures the continuity of business operations and service provision to customers, and has a suitable customer protection system with an emphasis on customer data security.

• New product/process/system risk assessment program:

This ensures that all new products—or significant changes to existing process/systems—are subject to comprehensive risk evaluation and are approved by specialists prior to launch.

Business continuity management:

In order to ensure continuity throughout the Group, key risks and threats are periodically assessed, reviewed and monitored from a business continuity perspective, including political crises, pandemics, technology disruptions, flooding and other environmental impacts. Alternate site is regularly reviewed and improved. Business continuity plans are also regularly reviewed and improved to ensure that the Bank can continue to provide key products and services, and to carry out vital operations in time of crisis or un-anticipated event.

Operational risk reporting:

All units are required to report their operational risks such as RCSA, KRI and loss data to the Operational Risk Management Department for analysis. The group's operational risk

profile report is then prepared and delivered to the Risk Management Committee and Board of Directors regularly, to drive appropriate decision making.

Approach for operational risk capital

The Bank adopts 'standardized approach' to maintain Basel II minimum capital requirement against operational risk of the Bank and the Bank's Financial Business Group. The internal audit function takes an important role to ensure that capital calculation and operational risk management framework are qualified and aligned with BOT minimum requirements.

9. Equity exposures in the banking book

9.1 General information for equity position risk in the banking book

Equity price risk in the banking book

We assess the potential of securities issuer companies and has a policy to buy/sell equity securities mainly for medium-term and long-term investments purposes. In managing equity position risk in the banking book,, we monitor and report the equity price risk in the banking book and ensure that the level of capital fund is appropriate and sufficient to absorb losses arising from positions in the banking book.

Management of equity price risk in the banking book

The Bank's Board of Directors determines the total limit which shall be regularly reviewed at least once a year. Additionally, the Asset and Liability Management Committee is responsible for establishing policies and strategies as well as managing risks in relation to investment in order to ensure that the investments are effectively and appropriately undertaken and in alignment with economic situation and competition in the financial business. The Treasury Division is responsible for executing transactions under the risk limits approved by the Bank's Board of Directors as well as assessing the value of positions at least once a month. Furthermore, the Capital Market Department monitors and reports the equity positions to the Asset and Liability Management Committee on a monthly basis.

9.2 The different of risk management policy for equity securities:

9.2.1 Equity investment for the purpose of capital gain

As the purpose of the investment is to earn capital gain and dividend via a medium to long term investment, equity of the Bank is then directly affected by the change in market price of a security. The Bank, therefore, places importance on market risk management and also regulates the investment to be in accordance with the investment policy which has been regularly reviewed of at least once a year. Furthermore, an investment performance monitoring is reported to the Assets and Liabilities Management Committee on monthly basis.

9.2.2 Equity investment for other purposes

As for strategic investment, the Bank has policy to ensure that subsidiaries and associated companies in the financial business group, under consolidated supervision of the Bank of Thailand, operate their businesses under single framework and standards. This is to ensure that the Bank and the financial business group drive businesses in the same direction, and effectively manage their risks as well as prevent potential incidents that may incur from business operations and affect the confidence, soundness and stability of the Bank.

In this connection, subsidiaries and associated companies have responsibilities to prepare the annual business plan, and the projected annual profit and loss and submit to the Bank for consideration and approval as well as monitoring, in particular, the intra-group transactions and related risk management policies.

Moreover, the Bank also invests in 1) the company established to support and promote the government policy 2) other companies to generate a return on investment and, 3) the companies obtained from debt restructuring process, which risk management guideline requires performance monitoring to be conducted and report to the Financial Management Committee ("FMC") on a monthly basis.

9.3 Key policies on fair value measurement in accordance with the accounting standards, assumptions and guidelines on fair value measurement, including significant changes in the guidelines

The Bank has formulated the Mark-to-Market Model Policy for measurement of fair value according to the accounting standards and measurement of value of positions in alignment with the academic principle. The Bank also requires that the used Validated Rate for Revaluation must be obtained from reliable sources such as the Thai Securities Exchange Commission.

10. Interest rate risk in the banking book

Interest rate risk refers to the risk arising from change in interest rates to have an adverse effect on the net interest earnings and shareholders' equity. Interest rate risk arises from the structure and characteristics of the Bank's assets, liabilities and off-statement of financial position items, and in the mismatch in re-pricing rates of its assets, liabilities and off- statement of financial position items.

The assessment, control, and monitoring of interest rate risk in the banking book, we assess the probable impact on net interest income (Earning perspective) from assets, liabilities, and off-statement of financial position items, sensitive to interest rates or re-pricing gap in terms of static simulation and dynamic simulation according to the projected interest rate trend. In addition, we analyze interest rate risk which reflects the sensitivity of the economic value of shareholder equity (Economic value perspective) both at the Bank and at subsidiary level and and in compliance with Bank of Thailand's guidelines.

11. Liquidity Risk Management

Liquidity risk is the risk arising from failure to pay debts and contingent liabilities by the due date because of an inability to convert assets into cash. It also relates to the failure to procure sufficient funds, or fund procurement at a higher cost, thereby adversely affecting incomes and capital funds.

Liquidity risk comes from internal and external factors. The liquidity risk management policy has been implemented both at Bank and at subsidiary level to control and manage cash flow to ensure it is sufficient to cover activities under normal and stressed conditions. Contingency plans are formulated to deal with crisis situations and to set up a liquidity cushion (Contingency Funding Plans), and tested on a regular basis. In addition, we identify events or circumstances that could lead to a liquidity crisis through the employment of early warning indicators. All of the above-mentioned practices and undertakings are aimed at ensuring the efficiency of our liquidity risk management.

Diversification of Liquidity Sources and Funding Structure

Under a highly competitive and sophisticated financial system, , the Bank maintains liquid assets in accordance with regulatory requirements, and maintains an excess liquidity cushion at a level commensurate with the economic situation. We are ensured of adequate cash for both the Bank's and subsidiaries' business operations. Liquidity management utilizes qualitative and quantitative approaches to ensure appropriate risk diversification. The structure and behavior of customers' deposits/withdrawals are analyzed and considered to optimize balance between the cash flow demand for each period and the appropriate cost level.

In addition, the Bank has prepared and adjusted our strategies to meet the implementation under the Deposit Protection Agency Act through both an introduction of additional liquidity management tools

^{**} All currency converted into THB

together with alternative saving products offered to customers. In this regards, bills of exchange and debentures are continually issued within the limits approved by the Board of Directors.

Organization and Structure

The Board has delegated to the Risk Management Committee and the ALCO with the authority to manage and control liquidity risk as prescribed by the policy. The Asset and Liability Management Committee closely monitors the liquidity position and liquidity risk. The Treasury Division is responsible for carrying out regular reviews to determine appropriate liquidity levels, manage daily liquidity to meet the Bank's and subsidiaries' cash demands, and also undertakes regular analyses of the contingency plans for liquidity in two types of crisis situations: (a) temporary liquidity problems arising from daily transaction executions, and (b) medium- to long-term liquidity problems. To this end, the Committee is responsible for implementing its liquidity crisis management plan through the undertaking of the Funding Crisis Management Team (FCMT).

Liquidity Risk Measurement and Reporting

In 2011, Bank's aggregate liquidity risk was towards the lower end of acceptable levels. We employ a variety of liquidity risk management tools such as cash flow/liquidity projection and liquidity gap analysis which classify assets, liabilities, and contingent liabilities according to the remaining contractual maturity. In this regard, due consideration is given both to normal and crisis situations, and the results are adjusted in accordance with behavioral maturity to align with the actual behavior to ensure that the liquidity risk reporting and monitoring systems are efficient.

In addition, the Board of Directors monitors liquidity risk indicators which serve as early warning signs. These include the early warning point and trigger points, the daily decrease in total deposits, , and the top 20 depositors. These indicators are monitored and managed , to reduce the concentration of the Bank's funding sources, as well as maintain liquidity ratios. The Treasury Division proposes liquidity risk management guidelines and business strategies to the Assets & Liabilities Management Committee. Meanwhile, the Market Risk Management Department assesses liquidity risk levels and reports them to the Assets & Liabilities Management Committee.
